REPORT ON PATENTABILITY

Re Item V.

1. The following documents are referred to in this report:

D1 : US 3 001 947 A (ALVIN STAHLER ET AL) 26 September 1961

D2 : US 4 671 886 A (MUELLER FRANK J) 9 June 1987

2. Claim 1 is directed to a (bleaching) composition comprising from 0.0001 wt% to 0.1 wt% of Food red 14, from 0 to 40 % other bleaching species, except from peroxy species, which may be present in amounts of less than 1 %. Moreover, a unit dose of this composition forms a washing liquor having a pH of from 8 to 11. Claim 8 is directed to a respective textile bleaching method, wherein textiles are treated with a solution of Food red 14 and the treated textiles are irradiated.
 - 2.1 D1 discloses an aqueous detergent composition comprising ammonium hydroxide and a triphenylmethane dye; erythrosine, which is Food red 14, is explicitly mentioned. The amount of dyes is from 0.05 to 0.8 wt%, and thus, outside the range presently claimed. D1 is silent on respective data concerning the concentration of the dye in the washing liquor.
 - 2.2 D2 discloses coloured liquid detergent compositions comprising dyes in an amount ranging from 0.0002 to 0.0005 wt.%. Red No. 3, which is Food red 14 is explicitly mentioned in column 3, line 60 of D2. D2 is silent on peroxy bleaches. Since there is no indication regarding the pH values of the compositions of D2, novelty has to be acknowledged for claim 1.
 - 2.3 None of the documents cited in the International Search Report teaches that Food red 14 can be used as a photobleach. The subject-matter of the present claims are therefore considered to involve an inventive step.
